FORWARD

The need to exchange information on research in reindeer and caribou diseases became apparent to investigators attending the Second International Reindeer/Caribou Symposium in Roros, Norway, in 1979. Initially, bibliographies were to be exchanged by being submitted to and subsequently distributed by workers at the University of Alaska. When the bibliographies were submitted, it seemed sensible to computerize the lists to facilitate searches for specific information in the future. An apparently simple task became amazingly complex.

This is the resultant collection of publications by reindeer/caribou disease researchers. Because researchers in wildlife diseases tend to work on more than one species or topic, out of interest or necessity, a decision was made to include all of a person's references rather than to limit them to strictly reindeer/caribou diseases.

The authors hope this will provide a good basis for exchange of information among all those interested in reindeer/caribou diseases.

INTRODUCTION

Fields included in the Bibliography of Reindeer/Caribou Disease

Investigators are as follows:

AUTH	Author of article
DATE	Date of publication
TITL	Title of the article
PUBL	Publication; name of book or journal
CHAR	Characteristics; additional qualifying information such as "information for farmers," "paper presented at...", thesis, etc.
LANG	Language of article as well as language of any summaries
KEYW	Key words that would be of use in a literature search
SOUR	Source of the article; the address from which one may obtain a reprint or information

Not all fields are included for each reference. If a field does not appear, either it does not apply or the information was unavailable. Information may be searched by any field.
